Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: .cent. For a general formula, then, we may use the fraction  $k$ , and then, assume for particular classes of localities, a mean value of  $k$ , provided the variation of humidity in any proposed class of localities is not too great. Using the general value,  $k$  of the humidity, we may correct the reading of the barometer so that it may be used in the formula for density, as follows: Let  $p$  be the reading that would, if produced by dry air, pertain to the actual density for which a barometric reading  $p$  is recorded; then,  $p_v$  being the vapor-pressure at the time,  $P = P + P_v = P - fP_v = P - kF$  (4) For a barometric pressure  $p$ , for dry air, we have from (2)  $d p 492$  lb) Using with this formula the values of the readings for standard conditions; viz: bar: 29.5275; ther. 59;  $k$  = we have representing the standard density by  $Ht S$ , 29.4335 492 since  $F = 0.50$ , for standard conditions. Dividing (5) by (6), member by member, we have  $5, l 1 460 + t x = L8-y 6--0-0-TiEP$  (7) From this formula, we might compute a table of values of  $y$  for any assumed mean percentage of saturation; e. g., for  $k = 0$  that is, for dry air; or for  $k$ , i. e. 50 saturation, or as in Artillery Notes No. 25, for 78 r. h. Taking  $k$  as, which approximates sufficiently to the latter for all practical purposes, our formula...
